January 5, 2012

Mr. Steve Rodregues, President
Black Ball Line LLC, dba Puget Sound Navigation Company
1801 Taylor Way, Tacoma, WA. 98421

Architecture for Humanity is a community service organization which promotes and supports projects which reinforce communities and represent outstanding examples of design and community needs. We are a network of design professionals including architects, landscape architects, industrial designers and historic preservation specialists among others.

The Seattle Chapter of **Architecture for Humanity** endorses the cause of preserving the historic vessel M/V Kalakala. Our members will assist with this effort by donating time and services in the following ways:

- Providing drawings and promotional material focused on the goal of rehabilitation of the vessel
- Assist work crews on work which contributes to the physical appearance of the ship
- Coordinate and review work provided by design professionals
- Ensure work performed on vessel conforms to its inherent design characteristics and are in keeping with its historic nature
- Access our available network of grant and donations to ensure the ship's preservation

We recognize that M/V Kalakala is a unique and extremely important from a regional, national and international perspective. She exhibits important design and technology milestones and is an icon of contemporary marine architecture which should be preserved.

Please let us know how **Architecture for Humanity** can help you with your efforts to rehabilitate the historic vessel M/V Kalakala. We will provide all available efforts toward that successful end.

Regards,

Steven Dombrowski
Chair
